Book Descriptions:

We have made it easy for you to find a PDF Ebooks without any digging. And by having access to our ebooks online or by storing it on your computer, you have convenient answers with canon powershot sx220 manual . To get started finding canon powershot sx220 manual , you are right to find our website which has a comprehensive collection of manuals listed.

Our library is the biggest of these that have literally hundreds of thousands of different products represented.

Book Descriptions:

canon powershot sx220 manual

The compact Canon PowerShot SX220 HS houses a 14x 28392mm wideangle optical zoom lens lets you get close to the action and also capture sweeping panoramic landscapes or large group shots. The high sensitivity 12.1 MP CMOS sensor and high performance DIGIC 4 processor give superior image quality even in low light situation. The 4stop Optical Image Stabilizer ensures clear, steady shots every time. The PowerShot SX220 HS features Smart Auto mode detecting up to 32 different shooting scenes so you can take great pictures in complete confidence. Other highlights include 3.0inch LCD screen, 1080p Full HD video recording, Slow Motion Movie up to 240fps, Manual Control, Handheld Night Scene mode, Face Detection and Automatic RedEye Correction. TMs chapter assumes that the camera has been set to the corresponding mode. The camera will set the appropriate aperture value for the shutter speed you set. Setthe mode dial to Tv.The camera will set the appropriate shutter speed for the aperture value you set.Setthe mode dial toM.If you are using an earlier version of the software, download the latest version from the Canon home page. There's a 14x, 28392mm optical zoom lens with builtin image stabilizer, 12.1 megapixel backilluminated CMOS sensor, 3 inch LCD screen with 460kdot resolution, DIGIC 4 image processing engine, full 1080p HD Movie Mode with stereo sound and an HDMI output, and Smart Auto mode with Scene Detection Technology and an Easy mode for beginners.

The Canon SX220 HS also offers a full range of manual exposure modes for more experienced photographers looking to take control, 8.1 fps burst shooting at 3 megapixel resolution, and a Super Slow Motion Movie mode. The new Canon PowerShot SX220 is priced at 269 and is available in purple or grey. The build quality is the usual marriage of plastic and metal, with the PowerShot SX220 HS feeling sturdy enough when gripped in the palm to withstand the odd drop or knock in its inactive state. Curved edges make it appear less boxy and rectangular than it actually is. Whilst the camera is bigger than your average compact, it still just about fits into your pocket and is reasonably light too at 215g even with the memory card and battery inserted. Plus the modest additional bulk feels a fair compromise for that builtin zoom power, the lens extending an ungainly 2inches from the body when at maximum 392mm equivalent telephoto setting. Canon has here thoughtfully included an easy mode in addition to the scene and subject recognizing Smart Auto the former denoted by a camera with a heart icon that more usually denotes a favourites setting. This disables pretty much everything in terms of user selectable shooting options and so allows for fuss free point and shoot operation. As with the latest additions to the Olympus Pen series, here we get access to a diorama effect which Canon has simplified on the function menu as miniature effect, fast becoming this years must have onboard feature, plus a perspective warping fisheye option. Further hand holding is provided by the Smart Shutter mode that as it sounds allows the shutter to be controlled with a

smile or a wink increasing the overall userfriendly feel and handy for when you want to include yourself in the picture. Certainly the tilt and shift lenslike miniature effect that transforms friends and colleagues into the equivalent of toy soldiers is hard to resist.

Plus, with a press of the display button on the Canons back plate followed by a toggle of the zoom switch on the top plate, users can go one further and precisely control the width of the portion of the image that is sharply in focus, leaving the rest artistically blurred. Smart Auto is deployed in movie mode, though, the camera referencing 18 different presets to find the most appropriate. Focus is automatically adjusted as the user zooms in or out, which, with no alternative manual adjustment ring, means the image can go soft for a moment or two before the camera locks on target. Canon states that Dynamic Image Stabilisation also kicks in when shooting video to ensure smooth tracking shots, of use when filming whilst walking for example. The SX220 HS records 1920x1080p Full HD movies at 24fps with stereo sound, making it one of the few compact cameras currently on the market to offer such good quality. Otherwise the PowerShot SZX210 IS incorporates technology very similar to its other current nonsuper zoom IXUS and PowerShot compacts. As previously touched on, it features Smart Auto with Scene Detection Technology whereby the camera compares subjects with 22 onboard variables and selects the most appropriate for optimum results. Also making an appearance here are shadow detail enhancing iContrast, Smart Flash Exposure which adjusts flash levels according to prevailing conditions, plus Face Detection technology which can recognize up to a whopping 35 faces in a frame, whilst Face Self Timer allows you as photographer to join them before the shutter fires. Good, as this lessens the chance of red eye with automatic red eye correction software further builtin as a belt and braces approach and selectable via the shooting menu folder. However, unlike competing models that present said flash when requested, the Canons flash automatically pops up when the camera is initially switched on, whether you like it or not.

This is inevitably slightly irritating if you dont actually intend to use it. Pressing it down and returning it to its dormant state naturally deactivates it, but at times it feels more like youre fighting with the camera than engaging seamlessly with it. As regards video, the ability is also provided for EyeFi transfer and the camcorderlike direct upload of videos to YouTube to keep the younger members of the family happy. Were provided with a smattering of style despite its plasticity build by virtue of the different coloured top plate strip that continues down both sides of the camera and thus frames the faceplate like the mantle of a fireplace. Top right of the lens, we find a tiny catch for manually activating the pop up flash via a fingernail if required. There are also two small holes either side of the lens for the stereo sound microphones. Looking at the SX220 HS from the rear we find the flash positioned over to the far left and neatly flush with the body when not in use and a built in speaker for playing back sound with clips. Over to the far right where it naturally falls under the forefinger of the right hand is the shutter release button. Apart from the rear plate shooting mode dial and scroll wheel its the largest control here and has just the right amount of give to enable users to determine a definite halfway point when pressed. Now encircling the shutter release button is a responsive rocker switch for operating the zoom a nudge to the right zooming in, to the left zooming out. Go on to fire the shutter and a full resolution 12 megapixel image is committed to memory in a couple of seconds, the screen briefly blanking out before returning to the realtime scene before the lens. The amount of time the captured image appears on screen as a means of review can be altered via the menu folders.

Thats unless one is shooting HD movies with stereo sound, whereby the picture is automatically relayed in 169 ratio to more closely ape how it would appear when viewed on a desktop PC, or a flat panel telly. This rigidity ensures it clicks into place for each setting in such a way that it is hard to accidentally slip from one option to another when fetching the camera out of a pocket or camera bag. The 13 strong options here comprise Smart Auto and Easy Auto modes as discussed, plus the creative quartet of Program, Aperture Priority, Shutter Priority and Manual shooting settings. All of

the other scene modes setting are grouped together under the Scene option, and there's also a new Effects mode and last on the dial the movie shooting option. That said, users don't have to actually be in movie mode to commence filming a press of the dedicated recording button lets video capture commence as a handy short cut. A new addition to the shooting mode dial is the Movie Digest option. This captures up to 4 seconds of the action before a shot is taken, then joining all the clips together from the same day into a single VGA movie, which creates a timelapse movie overview. A familiar to Canon users at least toolbar of options is then presented at the left hand side of the LCD. The first option you come to is record mode, and this is where the Fisheye, Miniature, Toy Camera, Monochrome, Super Vivid, Poster, Colour accent and Colour swap effects live. A live preview of each one is handily shown on screen so you don't even have to take a picture to see what the results of each effect will be. There's also the Highspeed Burst mode, Best Image Selection, Handheld NightScene, Low Light, Beach, Underwater, Foliage, Snow, Fireworks and Stitch Assist Panorama options. By moving up or down the same toolbar the likes of white balance can be manually adjusted, the Canon proprietary My Colors effects turned on or off, and quality settings further adjusted for shooting both stills and video.

In manual focus mode a distance slider appears at the right of the screen, adjustable with a swivel of the scroll wheel so it's a bit fiddly, rather than more intuitively tabbing up or down. As it is, no less than six button presses are required before a duff shot can be deleted. Such tediousness seems to go against the ease of use ethos deployed elsewhere in the camera's operational arsenal. Via the menu screens, users can also activate compositional grid lines or opt to present an image with grey bars cropping the default 4:3 presented ratio to a 3:2 ratio equivalent if so desired. Subsequently a press of the menu button itself brings up two folders the first containing the shooting menu it's here users can activate the likes of the iContrast setting the second the standard set up menu. Under this compartment there's a plastic lug for attaching the wrist strap provided in the box. Underneath a side open catch and door at the base of the SX220 HS there's another dual compartment with a slot for media card plus the provided rechargeable battery, good for a so-so 210 shots from a full charge, 50 less than its predecessor. Of course, build and handling aside, image quality is ultimately what counts, so we're interested to see how the Canon performs on that count. The new sensor allows high speed shooting and should lower noise in images, compared to the high noise results of the predecessor. Canon Powershot SX220 HS Features. The Canon Powershot SX220 HS is one of the smallest digital cameras available with a 14x optical zoom lens and is well worth looking at if you want a camera with advanced features, and a lot of zoom. The camera includes full HD video recording with stereo sound and lets you use the optical zoom while recording. A metal body and high speed shooting rounds this camera off nicely with a full set of features and controls, as well as an abundance of scene modes, and colour modes.

Key Features Dynamic IS The camera is one of the smallest cameras available with a 14x optical zoom lens, with most other cameras offering 14x zoom or more tending to be larger in the pocket. Because of this there's not a lot of grip, instead you have to use your thumb to grip onto the rear mode dial. The design is obviously popular at Canon, as the camera looks almost identical to the previous model. Including a popup flash that pops up every time the camera is switched on. This can be easily pushed down and manually raised later if needed I found that whenever I switched the camera on my hand was on the flash and therefore it stayed down. The buttons are large and easy to use. The mode dial is the right level of firmness so that you don't accidentally change mode, which is a good feature, especially as it's the most natural and perhaps only place to grip the back of the camera. The screen is a widescreen model with 16:9 view meaning that the default image size of 4:3 photos will show black borders, and you get a smaller view than you would if they had used a 4:3 or 3:2 aspect ratio screen. Alternatively you can take all your photos at the 16:9 aspect ratio but then you are limited to 9Mp 4000 x 2248 images. Menus Canon menus are good, they are colour coded so that each mode Photo, Playback, Setup etc is easily recognisable. Once you are used to accessing the

most popular controls using the Func button and back buttons, and the more advanced controls in the menu system, the camera becomes easy to use. They respond quickly and there is a good level of control and options so that you don't feel too limited when using the camera. This is lower than much of the competition, so it could be worth considering buying a spare battery if needed. Speed We tested the Canon Powershot SX220 HS, and tested the camera with the Panasonic Lumix TZ18, and Nikon Coolpix S9100, taking 6 shots and using the average to ensure consistent results.

The camera generally performs quickly, with up to 3fps shooting at full resolution although we only managed around 2.5fps, and a high speed class 6 card is recommended to take advantage of this, especially if you plan on recording Full HD videos. The Canon Powershot SX220 HS produces images that have good detail and excellent colour. Here are some sample photos you can enlarge. At ISO3200 noise becomes very noticeable. Using ISO100 to ISO400 noise is very low, and again at ISO800 noise is low. Some of the creative modes and photographic features are shown below Auto white balance under fluorescent lighting produced very good results and there is very little difference between the auto white balance and the preset. Macro Performance The portrait shot came out well, however there is some red-eye noticeable in this photo, and better results can be produced by using the red-eye reduction flash. Video Mode The optical zoom is much slower when recording, however this means that barely any lens noise is picked up on the video. Canon Powershot SX220 HS Verdict. The Canon Powershot SX220 HS improves on the previous model by introducing a new 12Mp back lit CMOS sensor, this enables better noise performance with lower noise at higher ISO settings, and quicker performance. The lens is good although there is some vignetting at full optical zoom. The screen looks great although some may find the 16:9 aspect ratio awkward for standard photos, but great for Full HD video recording. The camera is extremely compact considering it has a 14x optical zoom lens, and makes a great travel companion. Recommended! Dynamic IS in Movie New to ePHOTOzine Join Today! By using our service, you agree to our use of cookies. OK Learn more. Ideal for beginners to hone their skills further, the SX220 HS has a focal length of 5.70 mm with a 35 mm equivalent focal length of 28.392 mm.
